

Kidsy

Kidsy is a platform that simplifies communication between parents and pedagogues (caretakers) at the daycare institutions, nursery homes and more. It is an intuitive solution that enables caretakers to plan and document activities, inform parents instantly with photos, messages, practical data or schedules etc., from anywhere & anytime. Most practical information about kids is on demand, and parents do not know how the day was, unless they ask caretakers.

Kidsy resolves this problem in a most simple manner and creates a win-win situation for the caretakers and the parents. Kidsy significantly reduces time and effort (cost efficient), and assures that important information about the children is evenly distributed to every parent. The Kidsy platform significantly improves existing organizational and formal processes in day-care institutions by merging workload activities and functions into a single digital platform.
