

# WIRELESS ENERGY PROTOCOL

The specific objectives of the project are:

- Transfer energy from the constructed national feed to a receiving object
- Using an app the end customer will be able to charge wireless his/her phone/notebook/tablet
- Further possibility to charge your home appliances

Imagine a world where you don't need cables.

Imagine a world where you travel in the train and you can both browse the internet and charge your phone

Imagine a world where all your home appliances don't have any cables.

That all starts. Now. Wireless Energy Protocol.
